### REPAIRING SMALL DENTS IN WALLBOARD

Objects that come in contact with wall board can cause dents or scratches in the surface. These indentations are easy to repair.

First, sand the surface thoroughly. This sanding provides a good base for the joint compound you will

Use coarse sandpaper and a good sandpaper block. For use a power sander.

Fill the dent with a good grade of joint compound using a 3" or 4" spreader. Spread the compound evenly, pressing it firmly into the dented area.

For extremely large dents, allow the compound to dry overnight and then apply a second coat.

When the material is completely dry, sand the area and prime it for a coat of paint or other finish.

Be sure to remove any high or low spots in the patched area with a fine sandpaper.

roughens the surface and use.
